How to Build a Registration & Login System Using PHP

About this course:

This course teaches the fundamentals of creating a registration and login system from scratch. You'll learn how to set up and connect to the database, allow visitors to register on your website and sign in, giving them access to member only areas. You'll also learn how to create admin only areas, upload a profile picture as well as general tasks such as forgotten password reset, email activation and more. This course is for those who have basic knowledge of PHP. Login/Signup is the most common functionality in any other app.

The average salary for PHP Developer is **\$61,405** per year.

Course Objective:

After completing this course, students will have a working understanding of:

- To build a registration and login system for websites
