Course Duration: 30 Min

How to Set Up Your Own Cloud Server from Scratch

Have you ever wanted to have your own cloud server? Have you ever thought about starting a cloud storage business? Well, the first step is to get that server set up, and this course will teach you how!

About the Course

This course walks you through setting up your own cloud storage service using Digital Ocean. You will be shown how to install, set up and administer everything you need to get your cloud server up and running. While learning server technologies on your own can be difficult and time consuming, this simple, step by step course will have you up and running in about 30 minutes. This course is what you're looking for!

What Can You Use Cloud Storage For?

Lots of things! If you currently use a service like Google Drive or Dropbox, your own cloud server is an inexpensive and fun replacement, saving you money.

If you're a web developer, mobile app developer or game developer, you can use your cloud server to archive files as well as test and run your applications and games.

If you're an entrepreneur looking to break into the tech sector, you can use your server as a business. You can sell space to people who don't know how to set up their own server (99.9% of us), and create a monthly income stream for years to come.

Course Outline:

- Introduction to the Course
- How to Set Up Your Own Cloud Server

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
