Difficulty: Beginner

Course Duration: 3 Hours

## Python: Essential Course for Absolute Beginners

### About this Course:

In this course we will teach you the essential parts of Python that you need to know to start using web frameworks, data science or artificial intelligence.

We will start by learning about variables, strings, lists, loops and conditionals, then move on to functions, object oriented programming with classes and objects, modules and packages and round it all up with an introduction to unit testing.

### Course Objectives:

- How to properly install Python 3.6

- Introduced to variables and types
- The concepts of conditional, loops and control flows
- The basic concepts of Object Oriented Programming
- Introduced to the concepts of debugging and unit testing

## **Course Outline:**

- Introduction
- Your Local Dev Environment
- Python Basics
- Classes and Object Oriented Programming
- Modules and Packages
- Debugging and Testing
- Conclusion

## **Credly Badge:**

### **Display your Completion Badge And Get The Recognition You Deserve.**

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
